ABSTRACT

In 1994, a study was conducted to describe the Piedmont Virginia Community College (PVCC) service region in terms which would aid the college's strategic planning efforts. Major study findings include the following: (1) between 1990 and 2000, the population of the PVCC service district is expected to grow by 11.4%; (2) three localities enroll at PVCC a higher percentage of their populations than the average percentage of the service region as a whole (2.3%), Greene County (2.8%), Charlottesville (2.6%), and Louisa County, (2.4%); (3) the 45-70 age bracket is expected to increase by 77.5% between 1990 and 2010; (4) the 20-34 age bracket, currently with the largest percentage of PVCC students, is projected to decline by 7.1%; (5) between 1990 and 2000, the number of whites in the service region is projected to grow at a faster rate than the number of non-whites; (6) the Asian population is the fastest growing minority segment; (7) the population is moving toward a slightly higher percentage of females (52%) than males by 2010; (8) educational attainment varies greatly within the PVCC service region, with Albemarle County and the City of Charlottesville showing the greatest number of residents who have attended college; (9) family and household incomes in the PVCC service region are slightly lower. than the state average, with 25% of all residents in Albemarle County living below the poverty line; and (10) the PVCC service region is characterized by a highly professional workforce concentrated within government (40%) or services (30%). PVCC must continue to assess the current job market and employment trends to best prepare citizens to be competitive and competent. (KP)

Forging Ahead into the Twenty-First Century: A Demographic Profile of the PVCC Service Region

INTRODUCTION

In 1969, a steering committee representing the governing boards of Albemarle, Buckingham, Fluvanna, Greene, and Nelson counties, and the City of Charlottesville, petitioned the State Board for Community Colleges to establish a community college region in central Virginia. At the time, there were eleven community colleges operating in Virginia with approval for an additional nine to be opened within two years. No community college existed in the Piedmont region of central Virginia.

Although the University of Virginia (UVA) was located in the heart of this newly created service region, its highly selective nature and admission to only full-time males provided little opportunity to the diverse population of the region. The steering committee had ample reason to believe the educational needs of area citizens were ill served. The State Board for Community Colleges agreed.

In the following year, a permanent site for the new community college was purchased by the local governments. Additional land was allocated through a transfer of state-owned property from the Blue Ridge Sanatorium. On April 17, 1972, groundbreaking

ceremonies were held, and in the fall of 1972, Piedmont Virginia
Community College (PVCC) began offering classes in temporary
locations in Albemarle County, the City of Charlottesville, and on
the grounds of UVA. By the spring of 1973, the new facilities were
completed and instruction began on the campus during the summer
term.

Sensitive to the diverse educational needs of the citizens within the region, the mission statement of PVCC reflects its commitment to excellence in teaching and leadership in community service. This commitment is carried out through a broad range of services, including occupational/technical education, collegetransfer education, developmental courses, general education, continuing adult education, and community services. In 1992, PVCC strengthened its mission of service by adopting a statement on multicultural diversity. Using pointed language, the statement reads:

We are committed to creating and nurturing a campus environment which both welcomes and empowers all individuals. We recognize cultural differences of background, experience, and national origin, and we seek to promote a genuine understanding of and appreciation for these differences. We seek as well to recognize and promote the common bonds of humanity which cross the boundaries of cultural difference.

Much change has occurred within the region since PVCC first opened in 1972, and inevitably, world, national, state, and local events will continue to influence the region as the Twenty-First Century draws near. If PVCC is to continue to meet the needs of

¹Piedmont Virginia Community College Catalog, 1993-94 (Charlottesville, VA: Piedmont Virginia Community College, 1993), p.2.

its students, it is imperative that the college closely monitor the changing characteristics of the region. It is the purpose of this study to describe the PVCC service region in terms which aid the college's strategic planning efforts.

Specifically, the study is designed to supplement previous studies by providing descriptive data on the service region area, its citizens, and its economy. In July of 1990, a study was published entitled Beyond the 90's: The Changing Character of the PVCC Service Region.² Much of the information in this current report is an extension of the 1990 study, with the addition of 1990 census information, as well as recently published state profiles and projections. Further information regarding the service region may be obtained through a study published in August of 1991, entitled Serving the Community: Results of the 1991 PVCC Community Survey.³ This study, the result of a community survey of the service region, focuses mainly on campus services, resources, and facilities.

As in the earlier two studies noted above, an attempt has been made to identify major trends which might impact the college's service as it forges ahead into the twenty-first century. It is the intent of this report to provide a convenient, written source of key facts regarding the region PVCC serves.

³Ronald B. Head, Serving the Community: Results of the 1991 PVCC Community Survey (Charlottesville, VA: Piedmont Virginia Community College, Office of Institutional Research and Planning, August 1991).

AREA AND POPULATION

The PVCC service region consists of six counties--Albemarle, the northern half of Buckingham, Fluvanna, Greene, Louisa (which is shared with J. Sargeant Reynolds Community College), and Nelson. The City of Charlottesville is also included within the service region (see Figure 1).

O

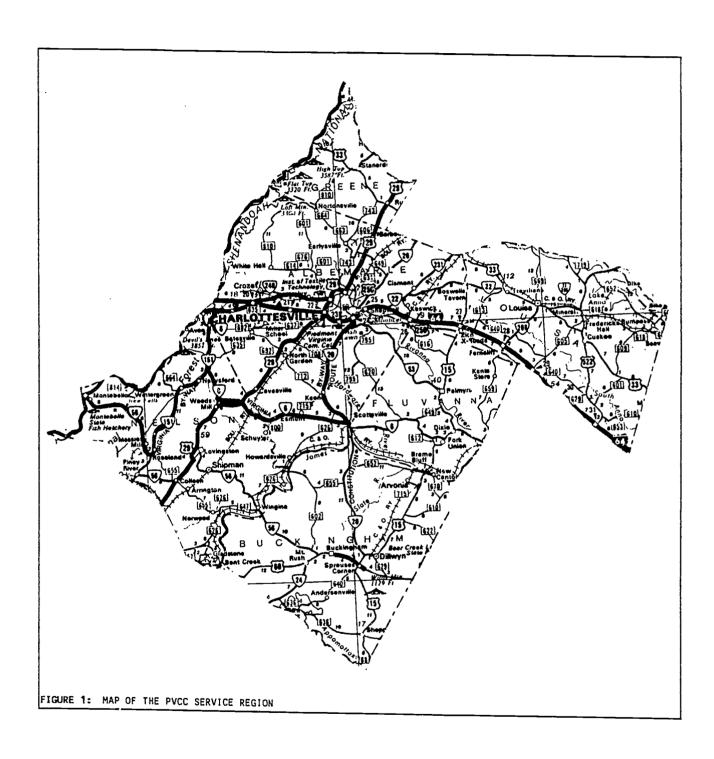

Albemarle County, established in 1744, consists of 725 square miles, ranging in terrain from rolling hills in the east to the Blue Ridge Mountains in the west. The largest employer of county residents is the University of Virginia. Albemarle County is also home of historic landmarks: Monticello, home of Thomas Jefferson; Ash Lawn, home of James Monroe; and Michie Tavern.

Buckingham County, founded in 1761, consists of 583 square miles of mostly rolling terrain. The county seat is located in the town of Buckingham. The largest town in the county, however, is Dilwyn, five miles east of Buckingham. Appomattox-Buckingham State Forest is located in the southeastern corner of the county, as is Holliday Lake State Park.

Fluvanna County was established in 1777 and encompasses 290 square miles of rolling terrain. The county seat is the town of Palmyra. In the western section of the county is the 500-acre lake and recreational community, Lake Monticello. Further east is the town of Fork Union, where a private military academy of the same name is located. The James River flows through the southeastern corner of the county.

4

Greene County, named for General Nathaniel Greene of Revolutionary War fame, was founded in 1838 and covers 157 square miles of steeply mountainous terrain in the west and gently sloping terrain in the east. Standardsville is the county seat.

Louisa County is the oldest locality within the PVCC service region, established in 1742. The county consists of 497 square miles of gently rolling terrain. The county seat is the town of Louisa, and north of Louisa is Lake Anna, the largest body of water within the service region, consisting of 13,000 acres and over 200 miles of shoreline.

Nelson County, founded in 1807, consists of 474 square miles of rolling to mountainous terrain. In the western part of the county lies Wintergreen Resort, occupying 10,000 acres in the Blue Ridge Mountains, and offering a full range of recreational sports and activities.

The City of Charlottesville was incorporated in 1880 and consists of ten square miles located in the center of Albemarle County. UVA is situated within the city, as are the two major medical centers within the service region--the UVA Health Sciences Center and Martha Jefferson Hospital. In many respects, the City of Charlottesville is regarded as the educational, cultural, and economic center of the PVCC service region.

Table 1 displays the amount of forest and non-forest land within the PVCC service region. Seventy-one percent of total land within the service region is forested. The percentage of forest land within the Commonwealth is slightly lower at 63 percent. Buckingham County (80.8%) and Nelson County (76.9%) have the greatest density of forest land while Albemarle County (62.3%) and Greene County (68.6%) have the least.

Locality	Fores Land	t Pct.	Non-Fore	est ect.	TOTAL
Albemarle	293,436	62.3%	1.7,393	37.7%	470,830
Buckingham	150,831	80.8%	35,870	19.2%	186,701
Fluvanna	137,348	74.0%	48,162	26.0%	185,511
Greene	68,858	68.6%	31,513	31.4%	100,372
Louisa	114,269	71.9%	44,634	28.1%	158,903
Nelson	233,316	76.9%	70,274	23.1%	303,591
Charlottesville	(Inclu	ded in	Albemarle	County	figures.)
Total	998,057	71.0%	407,846	29.0%	1,405,907

Just under one-third of all land within the service region is farmland. In 1987, the year for which the most recent figures are available, 1,995 farms were located within the service region, totalling 449,266 acres (32.0% of all service region land). The

average size farm
covered 220 acres.
Table 2 shows that
Albemarle (39.7%)
and Greene (39.2%)
counties have the
greatest percentage
of land being
devoted to farming,
while Buckingham
County has the
least, with just
over 20 percent of

Table 2: AGRICULTURE WITHIN THE PVCC SERVICE REGION (1987)

Locality	Number of Farms	Average Size per Farm (acres)	Total Farm Acreage	Percent of all Land

SOURCE: Virginia Statistical Abstract, 1994-95 Edition, Center for Public Service, University of Virginia, 1994. Because Buckingham and Louisa counties are shared with other VCCS institutions only one-half the number of farms and one-half the total acreage are included in this table.

its land being used for farming.

Between 1982 and 1987, the number of farms within the region decreased from 2,220 to 1,995 (10.1% decrease). The total farm acreage decreased by 6.8 percent. Although the average acreage per farm rose by 3 acres during the five year period, the decline in the number of farms and total farm acreage for the service region is expected to continue in the future.

The area of the service region in square miles, as well as the 1990 population and population density, are presented in Table 3. The largest locality in terms of area and population is Albemarle County. The smallest locality in both area and population is

Density within the region ranges from 22 persons per square mile in Buckingham County to 4,048 persons per square mile in the City of Charlottesville. The average density for the region is 73 persons per

Table 3: AREA, POPULATION, AND DENSITY OF THE PVCC SERVICE REGION (1990)

Locality	Area (square miles)	Population (1990)	Density (no. people pe square mile)

Nelson County	475	12,778	27		
City of Charlottesville	10	40,475	4,048		
Total	2,198	160,750	73		

SOURCE: Virgina Statistical Abstract, 1994-95 Edition, Center for Public Service, University of Virginia, 1994. Because Buckingham and Louisa counties are shared with other VCCS institutions, only one-half the area and one-half the population for each county are included in this table.

square mile. This average falls well short of the state average of 156 persons per square mile. In terms of population, the PVCC service region comprises roughly 2.6 percent of the total statewide population, while land within the service region comprises 5.1 percent of the total land within the Commonwealth. The City of Charlottesville is the twelfth largest city in the Commonwealth.

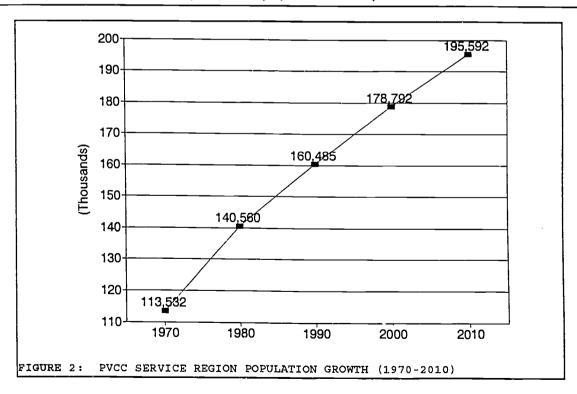

Population growth within the service region is presented in Table 4 and graphically in Figure 2. Between 1970 and 1980, service region population grew by 23.8 percent; between 1980 and 1990, it grew by 14.2 percent; and between 1990 and 2000, the population is expected to grow by 11.4 percent. Total growth

⁴ Note that Greene County population is least in that only one-half of Louisa and Buckingham counties are counted in Table 3.

between 1970 and 2000 within the service region is projected to be approximately 57.5 percent.

Table 4: POPULATION GROWTH WITHIN THE PVCC SERVICE REGION (1970-2010)

		Historical			Projected		(Rate of	Change)	Average Annual Rate of Change		
Locality	1970	1980	1990	2000	2010	1970- 1980	1980- 1990	1990- 2000	1970 - 1980	1980- 1990	1990 2000
Albemarle County	37,789	55,783	68,040	79,081	90,148	47.6%	22.0%	16.2%	4.8%	2.2%	1.6%
Buckingham County	5,299	5,876	6,437	6,691	6,805	10.9%	9.5%	3.9%	1.1%	1.0%	0.4%
Fluvanna County	7,621	10,244	12,429	14,503	16,206	34.4%	21.3%	16.7%	3.4%	2.1%	1.7%
Greene County	5,248	7,625	10,297	13,103	15,207	45.3%	35.0%	27.3%	4.5%	3.5%	2.7%
Louisa County	7,002	8,913	10,163	11,296	12,205	27.3%	14.0%	11.1%	2.7%	1.4%	1.1%
Nelson County	11,702	12,204	12,778	13,301	13,797	4.3%	4.7%	4.1%	0.4%	0.5%	0.4%
Charlottesville	38,880	39,916	40,341	40,817	41,225	2.7%	1.1%	1.2%	0.3%	0.1%	0.1%
Total	113,532	140,560	160,485	178,792	195,592	23.8%	14.2%	11.4%	2.4%	1.4%	1.1%

The greatest growth over the 30-year period between 1970 and 2000 is expected to be within Greene County (149.7% increase), followed by Albemarle County (109.3% increase). The localities experiencing the least growth are the City of Charlottesville (5.0% increase) and Nelson County (13.7% increase). Although no locality within the service region has experienced a decrease in population, the rate of growth has steadily decreased since 1970 and is projected to decrease beyond the year 2000. The only exceptions to this are projected to occur in Nelson County (1980-1990) and the City of Charlottesville (1990-2000), both of which recorded (and anticipate) slight increases in the rate of growth. The service region annual rates of growth for 1970 - 1980 (2.4%), 1980 - 1990 (1.4%), and 1990 - 2000 (1.1%) have in the last two decades begun to mirror the state average rates of growth for the same periods (1.5%, 1.5%, and 1.1%, respectively).

The percent of total service region population enrolled at PVCC, the PVCC service region headcount distribution, and the PVCC service region population distribution are shown in Table 5. Five of the seven localities enroll the same or a higher percentage of their population than the service region average (2.3%) -- Albemarle County (2.3%), Fluvanna County (2.3%), Louisa County (2.4%), the City of Charlottesville (2.6%), and Greene County (2.8%). These same localities, with the exception of Fluvanna County, also enroll a higher percentage of PVCC service region students than the percentage of residents within the total service region population.

Perhaps the reason that Nelson, Buckingham, and Fluvanna Counties enroll fewer students than other localities may be related to their geographic distance from the college. While approximately 20 percent of the service region population resides

1	able 5:	PVCC	STUDENT	HEADCOUNT	AND	SERVICE	REGION	POPULATION	(1990)

ervice Service Regi Headcount Population Distribution 3.3% 43.2%
3.3% 43.2%
1.9% 3.9%

3.3% 6.8%
6.6% 6.3%
5.0% 7.7%
7.0% 24.2%
3

The percentage of the service region population enrolled at PVCC (headcount) is determined by dividing the headcount from each locality by the population. Headcount data is actual fall end-of-term figures; population data is 1990 census figures. Note that since PVCC "shares" Louisa and Buckingham counties with other community colleges, only one-half of the populations of these counties are used in determining the enrollment-to- population percentages.

Distribution figures are (1) the percentage of PVCC students from each service region locality (out-of-district and out-of-state are excluded), and (2) the population percentage for each service region locality.

Again, only one-half of the populations of Buckingham and Louisa

Counties are used in calculating these figures.

within these localities, only 15 percent of the students attending PVCC come from these counties. Furthermore, less than 5 percent of the combined populations of these counties enroll at PVCC. On the other hand, Greene County, with the fastest growing population (See Table 4), enrolls the greatest number of residents at 2.8 percent. These figures indicate that the accessibility of college programs and services in the outlying counties may be need to be addressed.

POPULATION CHARACTERISTICS

The age distribution for the PVCC service region population in 1990, and the projected distributions for the years 2000 and 2010, are shown in Table 6. As can be seen, in 1990, just over one-quarter of the population was under the age of 19; roughly 11 percent were between 20 and 24; 18.2 percent between 25 and 34; 28.9 percent between 35 and 60; and 15.6 percent over the age of 60. By the year 2000, the 25 to 34 year old age category, and 45 to 59 year old age category is expected to reflect greater growth than any other category. By the year 2010, the increase in the older adult population will result in a service region population where close to 40 percent of the residents are over the age of 45.

The increase in service region population age, by age category, between 1990 and 2010 is shown in Table 7. The largest increase will occur in the 45 to 59 year age bracket (77.5%), with the second largest increase among those 60 years of age and older (50.4%). The number of persons 15 to 19 years old is expected to increase 30 percent over the period. However, the number 20 to 24 years old is expecting a marginal growth rate of 8.8 percent, and the 25 to 34 year old age category will see a decrease of 7.1 percent. Currently, the age category with the greatest percentage of PVCC students is the 25 to 34 age category (28.6%).

SOURCE: Virginia Population Projections 2010, Virginia Employment Commission, 1990.

As is graphically shown in Figure 3, the next twenty years will bring a substantial increase in the primary and secondary school population, and a huge increase in older adults (45 years of age and older). The next twenty years will also see a slight decrease in the age group, 20 to 34 year olds, that represents half of the PVCC student body (see Table 8). In order to better serve the residents of the service region during this period, it is imperative that the college focus attention on older adults and provide resources that will attract this age group to campus. Similarly, there is an anticipated increase in the number of traditional age students, an age category which accounts for one-third of the PVCC student population. The greatest service to the community will best be achieved by targeting the two growing populations -- traditional college-aged adults and older adults.

SOURCE: Virginia Population Projections 2010, Virginia Employment Commission, 1990

The 1990 census reveals that slightly under 20 percent of the PVCC service region population is non-white (see Table 9). The largest minority group within the region is African-American, accounting for 85 percent of all non-whites. Both the number of African-Americans and the percentage of African-Americans within the region have dropped since the 1980 census. However, the Asian population has grown rapidly during the last decade and now accounts for 1.7 percent of the total service region population and 8.5 percent of the non-white population. Between 1980 and 1990, the Asian population within the service region grew by 192 percent. The Hispanic population accounts for 5 percent of the non-white service region population, while the Indian population represents only 0.6 percent.

The 1990 census also reveals that the distribution of non-whites--especially African-Americans--within the service region varies considerably. The localities with the largest percentage of African-Americans are Buckingham County (40.8%) and Louisa County (25.7%). The locality with the smallest percentage of African-Americans is Greene County (6.4%). In regard to minorities other than Black, the greatest concentrations are within Albemarle County and the City of Charlottesville. Eighty-seven percent of all minorities other than African-American reside within these two localities.

Between 1990 and 2000, the number of whites in the service region is projected to grow at a faster rate than the number of non-whites. By 2000, the number of whites is estimated to be

146,472, a 12 percent increase in number since 1990, while the number of non-whites is estimated to be 32,320, an 8 percent increase. As can be seen in Figure 4, the percentage of non-whites in 1994 is estimated to be 18.4 percent; the percentage in both 1980 and 1990 was 18.6 percent.

Table 10 shows that

FIGURE 4: DISTRIBUTION OF PVCC SERVICE REGION POPULATION BY RACE (1994)

considerable differences exist

within the service region with respect to projected population

growth by race. For whites, the growth rates range from -8.1

Incality	White	Nonwhite
Albemarle	31.8%	37.0%
Buckingham	9.9%	-0.2%
Fluvanna	43.7%	-13.3%
Greene	49.9%	18.5%
Louisa	35.7%	-23.5%
Nelson	17.6%	-31.0%
Charlottesville	-8.1%	35.0%
 Total	23.4%	12.3%

rowth rates range from -8.1

percent in the City of

Charlottesville to 49.9 percent

in Greene County. For nonwhites, the range is even

broader, varying from

-31 percent in Nelson County to

37 percent in Albemarle County.

In both Albemarle County and the

City of Charlottesville, the

minority population is expected

to grow at a faster rate than the

non-minority population. In

Other (3.1%) -

~White (80.6%)

Black (16.3%)

Greene County both white and non-white populations are expected to grow. In all other localities, the white population is expected to grow while the non-white population is expected to decrease.

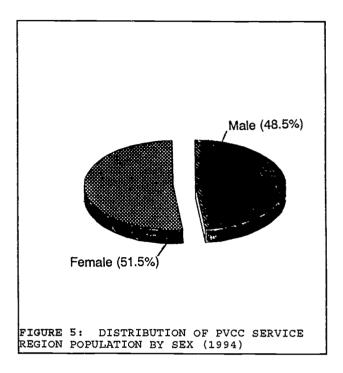

The distribution of the PVCC service region by both race and sex between 1990 and 2010 is shown in Table 11. The service region population is expected to remain fairly well balanced with respect to sex, although women generally outnumber men by several percentage points (see Figure 5). Between 1990 and 2010, the number of women will increase at a slightly higher rate than the number of men (23.1% as compared to 20.5%). By the year 2010,

		emarle	Bucki	ingham	Ch'	/lle	Fluva	anna	Gre	eene	Loui	isa	Nels	son	TOTA	۱L.

the gap in numbers between women and men will have widened so that approximately 52 percent of the service region population will be female.

At PVCC, nearly two of every three students is female (see Table 8). This has been the trend since the college opened in 1972. As the college commits itself to becoming a multicultural center of learning, it is imperative that programs and services be assessed periodically to insure that no barriers exist with respect to access and full participation of

all students. In light of the projected overall decrease in minority growth within the service region, continued efforts to meet the minority needs of students, faculty, and staff need to remain a high priority. Although PVCC is accustomed to matriculating non-traditional students, close assessment of the changing trends in demographics regarding age, gender, race, and socioeconomic status will greatly assist the college in developing effective programs and services.

CONSTRUCTION, HOUSING, AND TRANSPORTATION

Between 1980 and 1990, the number of housing units within the PVCC service region increased one and one-half times the rate the population increased. Table 12 indicates that in 1980, 54,551 housing units were located within the service region; in 1990 the number was 66,042, a 21.1 percent increase.

The localities experiencing
the largest growth in number of
housing units were Greene County
(35.8%) and Fluvanna County
(31.5%). The locality experiencing
the least growth was
Charlottesville (4.9%).

While the growth in housing units was moderate, the increase in the cost of these homes was substantial. As can be seen in Table 13, the increase in the

Table 12:	HOUSING UNITS	IN	THE	PVCC	SERVICE

SOURCE: Virginia Statistical Abstract, 1994-95 Edition, Center for Public Service, University of Virginia, 1994. housing during the 1980's.

Although the increase in the number and value of homes within the service region slowed during the 1980's as compared to the rapid growth of the 1970's, cost continues to rise at a greater rate than availability. In other words, there is an ample supply of homes in the service region, but the cost of these homes makes

home ownership difficult for many residents. Spending more money for homes may result in many families having less money to spend on items such as higher education.

Construction,
both residential
and nonresidential,
continues to be a
growth industry in
central Virginia.
Tables 14 and 15
show respectively
the number and
value of building

permits issued by service region localities. As can be seen from

the tables, both the number and value of building permits have fluctuated widely during the late 1980's and early 1990's. This is not uncommon for the construction industry in general. Between 1988 and 1992, an average of 1,775 residential and an average of 387 non-residential permits were issued.

SOURCE: Virginia Statistical Abstract 1994-95 Edition, Center for Public Service, University of Virginia, 1994. Because Buckingham and Louisa counties are shared with other VCCS institutions, only one-half of the number and value are included in this table.

NOTE: Values are in thousands of dollars

Within the PVCC service region lie nearly 40 miles of interstate highway, almost 442 miles of primary highway, and over 2,200 miles of secondary highways (see Table 16). A close relationship exists between locality size and number of highway miles. Albemarle County, with nearly twice the area of any other locality, leads all localities in the number of highway miles with 952.72. The second largest locality within the region, Nelson

County, has the second highest number of highway miles, 574.64.

Buckingham, Fluvanna, and Louisa counties are all similar in size and highway mileage. The smallest county, Greene, also has the least number of highway miles of any county within the service region.

Obviously,
additional
roads and
improvements to
existing roads
will make
educational
opportunities
at PVCC more
readily
available to
citizens within

Locality	Interstate	Primary	Secondary	Frontage	Urban System	TOTAL

SOURCE: Virginia Statistical Abstract, 1994-95 Edition, Center for Public Service, University of Virginia, 1994. Note that because Buckingham and Louisa counties are shared with other VCCS institutions, only one-half of the highway milage of these counties is counted in this table.

the service region. However, it is unlikely that any further primary routes leading into Charlottesville will be built.

Therefore, those residents living in remote areas of the outlying service region localities continue to be at an educational disadvantage. Satellite campus sites may be a response the college should consider.

In 1990, as is shown in Table 17, approximately 30 percent of all citizens within the PVCC service region commuted to work outside of the localities where they resided. Also recorded in

Table 17 are the means of transportation used in arriving at work. As might be expected most people drive alone. The large number of persons using public transportation in Albemarle County and the City of Charlottesville is a result of the expansive bus service which serves the two localities.

Table 17: JOURNEY TO WORK STATISTICS FOR THE PVCC SERVICE REGION (1990)

	Persons Working Outside	Mea	ans of Tra	ansportation

EDUCATION

Because the PVCC
service region ranges vastly
in cultural heritage and
background, the service
region population represents
a stark contrast in
educational attainment. The
1990 census reveals that
71.5 percent of the service
region residents have over
12 years of schooling and
26.8 percent have over 16
years of schooling (see

Table 18: YEARS OF SCHOOL COMPLETED BY PERSONS 25 YEARS OF AGE AND OLDER WITHIN THE PVCC SERVICE REGION (1980 AND 1990)

l a salitava	Over 12 Years of Schooling		Over 16 Years of Schooling

SOURCE: Virginia Statistical Abstract, 1994-95 Edition, Center for Public Service, University of Virginia, 1994.

Table 18). These figures are in line with state averages of 75.4 percent for those over 12 years of schooling and 24.5 percent for those with over 16 years of schooling. However, a closer look at individual localities shows the disparity between the Albemarle-Charlottesville area and all other localities. Both Albemarle County and the City of Charlottesville exceed the state averages in both categories. In fact, almost 40 percent of Albemarle County residents have obtained over 16 years of schooling. Fluvanna County is the only locality other than Albemarle County and Charlottesville to have 50 percent of the residents with 12 or more

years of schooling. On the other hand, only 35.7 percent of Buckingham County residents have at least 12 years of schooling and only 7.9 percent of the residents have over 16 years of schooling. The location of the University of Virginia and PVCC within the county of Albemarle and City of Charlottesville explains the high educational attainment within these two localities. It is apparent, then, that a demonstrated need for educational opportunities lies within the outlying localities where just under one-half of all residents have never taken a college course.

Table 19: PVCC SERVICE REGION PUBLIC SCHOOL PUPIL-TEACHER RATIOS (1991-92)

SOURCE: Virginia Statistical Abstract, 1994-95 Edition, Center for Public Service, University of Virginia, 1994. Note that because Buckingham and Louisa counties are shared with other VCCS institutions, only one-half of the FTE teaching positions and student membership from these counties are counted in this table.

schools are providing greater individualized attention than schools in other parts of the state. Lower pupil-teacher ratios are one indication that more individualized attention, and perhaps better overall instruction, is occurring within a school or school

district. As can be seen in Table 19, pupil-teacher ratios for the PVCC service region average 14.5 for elementary and 11.7 for secondary schools. These fall below the state averages of 15.6 and 12.3, respectively. Among elementary schools, only Fluvanna County (17.6) and Louisa County (17.9) have higher ratios than the state average. Among secondary schools, only one locality, Albemarle County (13.7), has a higher ratio than the state average. The City of Charlottesville boasts the best figures for both elementary and secondary schools with ratios of 13.5 and 9.9, respectively.

The total number of students enrolled in public schools within the PVCC service region during the late 1980's and early 1990's is shown in Table 20. Small yearly increases in the number of students occurred during the late 1980's, while more substantial increases occurred during the first three years of this decade.

Between 1987-88 and 1992-93, three localities experienced

	198	37-88	198	38-89	· 19	39-90	199	90-91	199	71-92	199	92-93

SOURCE: Ronald B. Head, *PVCC Service Region High School Graduates*, (Charlottesville, VA: Piedmont Virginia Community College, Office of Institutional Research and Planning, April 1994). Because Buckingham and Louisa counties are shared with other VCCS institutions, only one-half of the graduates are counted in this table.

that over the four-year period, 39.7 percent of all high school graduates have come from Albemarle County. This is almost three times as many as the next two highest localities, Charlottesville (14.3%) and Louisa County (14.1%). All other localities contribute less than 10 percent of the total graduates.

The number of high school graduates decreased 3.2 percent between 1989 and 1990, and decreased 2.5 percent between 1990 and 1991. A slight increase of 1.2 percent occurred between 1991 and 1992, and then another drop of 2.8 percent occurred between 1992 and 1993.

According to the recent study, PVCC Service Region High

School Graduates⁵, the decline in graduates is expected to be reversed beginning this year. However, high school graduation rates have not proved to be good college enrollment predictors due to the low number of actual enrollments directly from high school. The report indicates that more importantly, simply maintaining a continued 20 percent enrollment rate among high school graduates over the next twenty years will result in an additional 100 to 150 additional students per year during the first decade of the Twenty-First Century. This should hold true for the service region if the projected growth of 15-19 year olds over the next 20 years proves accurate (See Table 7).

⁵Ronald B. Head, *PVCC Service Region High School Graduates* (Charlottesville, VA: Piedmont Virginia Community College, Office of Institutional Research and Planning, April, 1994).

INCOME AND EMPLOYMENT

Family and
household income in
the PVCC service
region are on the
average lower than
in the state of
Virginia as a whole.
The median family
income for the
region in 1989 was
\$36,640, an amount
considerably lower
than the statewide
median family income
of \$38,213 (see

,	Median F	amily Ind	come	Median Ho	usehold	Income
Locality	No. of Families	Median Income	Rank	No. of Households		Rank
Albemarle County	17,102	\$42,661	17/136	24,387	\$36,886	21/136
Buckingham County	1,650	\$27,164	103/136	2,198	\$22,661	97/136
Fluvanna County	3,538	\$34,776	41/136	4,495	\$31,378	37/136
Greene County	2,910	\$33,237	48/136	3,737	\$29,799	41/136

Virginia 1,0	642,735	\$38,213	2,	294,722	\$33,328	

Public Service, University of Virginia, 1994. Note that because

institutions, only one-half of the number of families and households

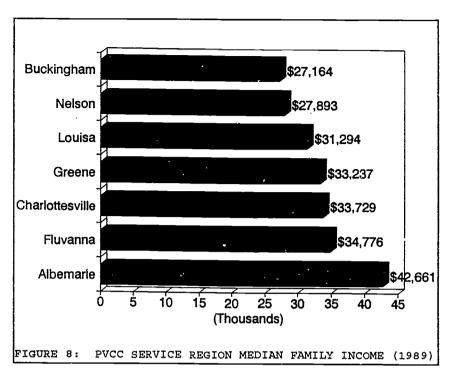

Buckingham and Louisa counties are shared with other VCCS

Table 22). Similarly, the median household income for the region, \$30,325, was considerably lower than the statewide median household income of \$33,328.

is included in this table.

However, as can be seen in Figure 8, the median income varies considerably from one locality to another. Within Albemarle County, both median family income (\$42,661) and the median household income (\$36,886) are much higher than the statewide averages. Albemarle County ranked 17th of 136 localities in median family income and 21st in household income. Buckingham County, on

the other hand, ranked 103rd in family income (\$27,164) and 97th in household income (\$22,661).

Table 23
provides the per
capita personal
income for the PVCC
service region
between 1987 and

1991. With the exception of Albemarle County, all other locality per capita income fell

(1987-1991)

well short of the statewide average.

Buckingham County and Greene County fared the worst over the five year period. It is not surprising, then, that the number of persons living below the poverty level is relatively high within the service region.

Locality 1991 1990 1989 1988 1987 Albemarle County \$20,303 \$20,197 \$19,793 \$18,102 \$16,704 Buckingham County \$13,042 \$13,056 \$12,403 \$11,604 \$10,768 \$15,152 \$14,886 \$13,488 \$12,493 \$11,866 Fluvanna County Greene County \$13,598 \$13,955 \$14,558 \$12,712 \$11,808 Louisa County \$14,958 \$14,989 \$14,505 \$13,337 \$12,666 **Nelson County** \$16,080 \$15,135 \$14,219 \$13,082 \$12,697 Charlottesville (Included in Albemarle County figures)

Greene County	1,260	12.3%
Louisa County	1,229	12.2%
Nelson County	1,924	15.2%
Charlottesville	9,025	23.7%
Total	20,548	13.0%
State Totals	611,611	10.2%

SOURCE: Virginia Statistical Abstract, 1994-95 Edition, Center for Public Service, University of Virginia, 1994. Because Buckingham and Louisa Counties are shared with other VCCS institutions, only one-half the number of residents are counted in this table.

Table 24 shows the number of persons and percentage of all persons within the service region localities who fell below the poverty level in 1989. The poverty rate for the service region is considerably higher than the average for the state. Again, only Albemarle County has fewer residents (7.6%) living below the poverty rate than the state average The City of (10.2%). Charlottesville had more than twice as many residents (23.7%) living in poverty than on average for the

state.

These tables all point to the fact that within the PVCC service region, there is both great affluence and poverty. Some of the nation's wealthiest citizens live in Albemarle County, yet 23.7 percent of Charlottesville residents are living below the poverty level. In Nelson County, the appalachian traditions celebrated in the television series, *The Walton's*, still flourish, while in western Nelson County, Wintergreen Resort thrives as an exclusive all-season resort.

Unemployment does not pose as serious a threat to the welfare of the service region as does poverty. As can be seen in Table 25,

the average
unemployment rate in
the region (5.4%) is
lower than the
statewide average
unemployment rate
(6.4%). However, as
was the case with
income, unemployment
varies considerably
from one locality to
another. In
Albemarle County and
the City of

Table 25: PVCC SERVICE REGION CIVILIAN LABOR FORCE AND UNEMPLOYMENT (1992)

Locality	Total Civilian Labor Force	No. of Unemployed	Unemploy- ment Rate
Albemarle County	37,256	1,536	4.1%
Buckingham County	2,952	200	6.8%
Fluvanna County	7,318	440	6.0%
Greene County	6,421	459	7.1%
ouisa County	6,075	530	8.7%
Helson County	6,054	503	8.3%
Charlottesville	22,161	1,073	4.8%
Total	88,237	4,741	5.4%

SOURCE: Virginia Statistical Abstract, 1994-95 Edition, Center for Public Service, University of Virginia, 1994. The unemployment rate is the percent of unemployed within the civilian labor force. Because Buckingham and Louisa counties are shared with other VCCS institutions, only half the number of employed and unemployed persons from each of these counties are included in this table.

Charlottesville, unemployment is under 5 percent. In the outlying counties, however, the unemployment rates range from 6.0 percent in Fluvanna County to 8.7 percent in Louisa County.

Table 26 presents covered employment and wages in the PVCC service region by type of employment. Well over one-third of all establishments in the region are service oriented. Services include hotels and lodging; personal and business services; auto services; repair services; entertainment, health, legal, social, and educational services; and private household services. Nearly 20 percent of all establishments are retail trade outlets, and 14 percent are construction-related. Nearly 30 percent of all employees in the service region are government workers. Of these,

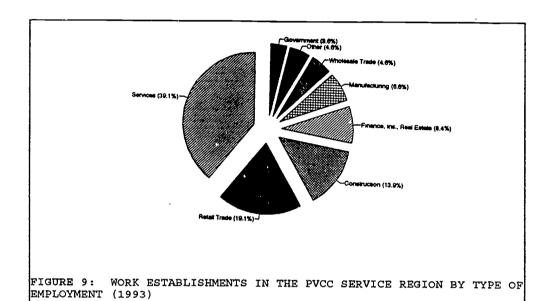

62.1 percent are in state government (the vast majority at the University of Virginia), 31.9 percent in local government, and 6.1 percent in the federal government. Over 23 percent of all workers are employed in service industries, and 17 percent are employed in retail trade. Over one-third of the service region payroll goes to government workers; service industries account for 19.3 percent of the payroll, and manufacturing accounts for 13.1 percent.

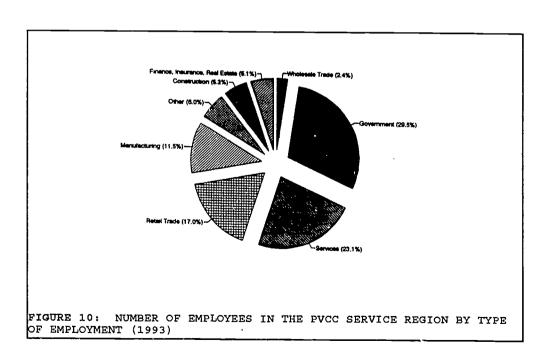

Table 26: COVERED EMPLOYMENT AND WAGES IN THE PVCC SERVICE REGION BY TYPE OF EMPLOYMENT (Quarter Ending June 30, 1993)

Locality	No. Estab- lishments	Pct.	No. Employees	Pct.	Quarterly Gross Wages	Pct.	Annualized Avg. Wages per Employee

SOURCE: Virginia Employment Comm ssion, "Covered Employment and Wages in Virginia." Because Buckingham and Louisa counties are shared with other VCCS institutions, only one-half of the covered employment for these counties is counted in this table.

Figure 9 shows the distribution of work establishments in the PVCC service region by type of employment. Figure 10 shows the distribution of employees by type of employment.

Approximately 80 percent of all work establishments, employees, and gross wages in the service region are generated in the Charlottesville-Albemarle County area (see Table 27). Just over 43 percent of all work establishments are located in the City of Charlottesville, and 34.8 percent are located in Albemarle County. Over 47 percent of all employees work within the City of Charlottesville, and 38.2 percent work in Albemarle County. Over 46 percent of all gross wages are paid within the City of Charlottesville, and 40.9 percent are paid in Albemarle County.

Past trends indicate that government and services are the fastest growing sectors of the job market in the service region,

while manufacturing jobs continue to decline.

Based on these changing economic trends, PVCC should engage in routine assessment of its curriculum and program offerings. While this study does provide a basic overview of the service region, its

purpose is not to be the basis for institutional review; rather, the purpose is to provide the necessary information to allow the college to *identify those areas* that might best be served through a thorough review.

Tables 28-34 present covered employment and wages in each of the PVCC service region localities. In these tables, major industries (manufacturing; retail trade; finance, insurance, real estate; services; and government) are further subdivided, and the average weekly wage per employees is shown for all industries and business for which data are available.

CONCLUSIONS

Between 1970 and 1980, the PVCC service region population grew by 23.8 percent; between 1980 and 1990, it grew by 14.2 percent; and between 1990 and 2000, the population is expected to grow by 11.4 percent. Total growth between 1970 and 2000 within the service region is projected to be approximately 57.5 percent. Although the growth rate is slowing within the service region, overall growth is still expected to increase at a rate faster than the state average. However, population density per square mile (73) is less than one-half of the state average (156). Population density ranges from 4,048 people per square mile in the City of Charlottesville to 22 people per square mile in Buckingham County.

Three localities enroll at PVCC a higher percentage of their populations than the average percentage of the service region as a whole (2.3%): Greene County (2.8%), Charlottesville (2.6%), and Louisa County (2.4%). Two localities, Albemarle County (2.3%) and Fluvaina County (2.3%), match the region percentage of 2.3 percent. Both Nelson and Buckingham Counties, which enroll a combined 2.6 percent of the total locality populations, are also the localities the greatest distance from the campus. Although distance may be the determining factor in lack of participation, a closer study of these two localities may be beneficial to better serve the needs of the PVCC service region.

47

The age bracket projected to experience the largest growth between 1990 and 2010 is the 45 to 70 year old bracket (77.5% increase in number); the second largest growth bracket will be those 60 and older (50.4% increase in number). The age bracket which currently contains the largest percentage of PVCC students (28.6%) is projected to be reduced by 7.1 percent between 1990 and 2010.

Between 1990 and 2000, the number of whites in the service region is projected to grow at a faster rate than the number of non-whites. Although the largest minority group within the region is African-American, the Asian population is the fastest growing non-white group (it experienced a 192 percent increase in number between 1980 and 1990). Regarding gender, two out of every three students at PVCC are female. The service region population is moving toward a slightly higher percentage of females than males (52% female, 48% male by 2010). Minority and special population needs will continue to be of great importance in the planning and coordination of PVCC programs and services.

Educational attainment within the PVCC service region varies greatly. Albemarle County and the City of Charlottesville have by far the greatest number of residents with both a high school degree and over four years of college. The outlying localities fall far behind with just over half the residents completing high school and less than 12 percent of the population completing four years of college. Determining the appropriate means of reaching these

outlying localities with programs and services would be of great benefit to the residents.

Family and household income within the PVCC service region are on the average slightly lower than in the state of Virginia as a whole. Due to the wealth concentrated in Albemarle County, the total service region average is misleading. If Albemarle County were removed from the service region, family and household income would be considerably lower than the state average. Although the number of persons living below the poverty rate and the unemployment rates are also higher in the outlying localities, the City of Charlottesville, located in the heart of prospercus Albemarle County, has almost one-quarter of all residents living below the poverty rate.

Economically, the PVCC service region is currently characterized by a highly professional workforce concentrated within the government and services job market sectors. Nearly 40 percent of all establishments are service oriented and almost 30 percent of all workers are employed in government positions. Although the Albemarle-Charlottesville area remains the economic and cultural center of the service region, service region economic development efforts at PVCC are leading to new economic growth within the outlying localities.
